

APPENDIX A

- The population for the catchment area used as the denominator in calculating bed day usage per 10,000 population in the FY02 Report was the total population in the catchment area, which means the combined total of adults and children.
- In the FY03 report and in subsequent years, the total population less than 18 years will be used to calculate bed days used per 10,000 population for youth.
- In the FY03 report and in subsequent years, the total population 18 years and older will be used to calculate the bed days used per 10,000 for adults.
- Bed Days Allocated, Bed Days Used, and Percent of Annual Allocation Used are independent of changes in the values of the denominators that are used in the calculations of use per 10,000 population in the CMHCs catchment area.
- The following tables provide comparisons of bed day usage per 10,000 population for youth and adults when children and adult populations are separated and when the total population is used.

YOUTH

Hospital	CMHC	FY03 Bed Days Allocated	FY03 Bed Days Allocated Per 10,000 (youth only)	FY03 Bed Days Allocated Per 10,000 (total pop)	FY03 Bed Days Used	FY03 Bed Days Used Per 10,000 (youth only)	FY03 Bed Days Used Per 10,000 (total pop)	FY03 Percent of Annual Allocation Used	2000 Census Population (youth only)	2000 Census Total Population	FY02 Bed Days Used	FY02 Bed Days Used per 10,000 (total pop)	FY02 Bed Days Used per 10,000 (youth only)
